160 students participated in a math competition. The results of the competition are as follow:

- 120 students received a score of at least 18.
- Among the middle 50% of the students, 40 of them received a score lower than 22.
- The median is three-quarter the length of the interquartile range from the upper quartile on the number scale. The two extreme values are 0 and 42.
